

KEERTHIK RAJA

DATA ANALYST

SQL | Power BI | Python | Excel | Forecast Modeling | KPI Design

keerthikbharath29@gmail.com | 86103 73797 | linkedin.com/in/keerthik-raja70 | Erode, Tamil Nadu, India

SUMMARY

Results-oriented Data Analyst with an Industrial Engineering background and hands-on experience in performance reporting, dashboard development, KPI tracking, and trend analysis. Skilled in SQL, Power BI, Excel, and Python for transforming raw data into clear insights and recommendations that support business decisions. Experienced in building interactive reports, monitoring key metrics, performing variance and root-cause analysis, and communicating findings to stakeholders in an actionable format. Well suited to remote analytical work requiring independence, accuracy, structured reporting, and continuous learning.

WORK EXPERIENCE

Industrial Engineer — Jay Jay Mills, Erode

Apr 2025 – Feb 2026

- Built shift-level production forecast models in Excel to monitor performance trends and support same-day corrective action, helping reduce an average production shortfall of 12% by the following shift.
- Prepared end-of-shift variance analysis reports that translated operational data into clear performance insights, enabling faster decisions by the operations team.
- Identified recurring loss patterns and root causes across multiple bottlenecks, with recommendations adopted within the same week to improve output consistency.
- Automated operator assignment audits using VLOOKUP and XLOOKUP across 5+ production lines, improving reporting accuracy and reducing manual checking effort.
- Maintained a structured, detail-oriented approach to data validation and reporting, ensuring reliable inputs for daily decision-making.

Data Analyst Intern — Zatheta Algorithms Private Limited

May 2026 – Jun 2026

- Built a 6-page interactive Power BI dashboard for securitisation portfolio analysis, covering Credit Risk Analysis, Recovery Analysis, Collateral Analysis, and Vintage Performance.
- Designed reporting views and KPI summaries that helped users monitor performance, identify trends, and evaluate portfolio behavior more effectively.
- Used Power BI, Power Query, DAX, SQL, and Excel to clean data, model metrics, and present insights in a user-friendly format for business stakeholders.
- Supported data-driven decision-making by organizing complex data into clear dashboards, structured reports, and actionable analytical outputs.
- Demonstrated the ability to work independently on analytics deliverables while maintaining quality and documentation standards.

Data Analyst Intern — Internship Studio

May 2026 – Jun 2026

- Developed a 2-page interactive Power BI dashboard for Retail Sales Data Analysis, highlighting customer response, revenue performance, sales trends, and customer activity.
- Created KPI-driven reports using Power BI, DAX, and Power Query to help track business performance and surface trends across customer and sales data.
- Applied data analysis and visualization techniques to convert raw transactional data into decision-ready insights and performance summaries.
- Structured dashboard layouts with slicers, dynamic visuals, and clear metric presentation to improve usability and reporting clarity.
- Strengthened skills in independent project execution, reporting discipline, and communicating analytical findings effectively.

PROJECTS

End-to-End E-Commerce Sales Analysis Dashboard

Excel · SQL · Power BI

- Cleaned and standardized a 1,000-row raw sales dataset and built a unified data model using SQL CTEs, joins, and aggregations.
- Developed 6 custom DAX measures to track revenue growth, discount impact, product review scores, and category-level profitability.
- Built an interactive dashboard with dynamic slicers and drill-through filters for performance monitoring and trend exploration.
- Identified that the Dresses category generated disproportionately high revenue relative to its SKU count; this insight was adopted as a formal strategic priority and informed inventory allocation decisions.
- Demonstrated strong capability in turning business performance data into recommendations relevant to promotion and conversion outcomes.

Retail Sales Data Analysis

I Studio Internship · SQL · Excel · Power BI

- Performed month-over-month revenue analysis to identify seasonal sales patterns and changes in customer behavior.
- Segmented purchase activity by category and buying frequency to uncover trends that could support better targeting and business planning.
- Designed KPI dashboards in Power BI to visualize revenue growth, conversion-related indicators, and product performance.
- Delivered actionable reporting that supported future sales strategy and ongoing performance evaluation.

Securitisation Portfolio Data Analysis

Zatheta Internship · SQL · Excel · Power BI

- Cleaned and prepared a 6,000+ record dataset using SQL, resolving missing values, structural inconsistencies, and schema issues.
- Conducted exploratory data analysis in Excel to identify performance patterns, segment portfolio behavior, and establish reporting KPIs.
- Built interactive Power BI dashboards to visualize portfolio health, credit risk, cash flow structures, and ABS performance indicators.
- Strengthened analytical reporting, data storytelling, and dashboard design skills applicable to campaign and channel performance analysis.

SKILLS

- Performance Analysis & Reporting
- KPI Design & Dashboard Development
- Trend Analysis & Data Interpretation
- Excel Reporting & Spreadsheet Analysis
- Power BI, DAX, Power Query
- SQL, CTEs, Joins, Aggregations
- Python, Pandas, NumPy
- Forecast Modeling
- Variance Analysis & Root Cause Analysis
- Data Cleaning & Quality Assurance
- Business Insights & Recommendations
- Financial and Retail Data Analysis
- Workflow Automation Using AI
- Stakeholder Communication
- Remote Work & Task Management

EDUCATION

B.E. Mechanical Engineering

Govt. College of Engineering, Salem

CGPA: 7.68 | 2018 – 2022

12th Standard – 88%

10th Standard – 96.2%

M.A.M. Hr. Sec. School

CERTIFICATIONS

Python for Everybody

Univ. of Michigan · Coursera

Python Data Structures

Univ. of Michigan · Coursera

Data Analytics Internship

Internship Studio · No: ISDTAI3280639 · Jun 2026

ACHIEVEMENTS

- Workflow Automation Using AI & Build AI Agents
 - Built a Customer Support Agent using Retrieval-Augmented Generation (RAG)
- Developed an AI agent to automatically send emails using data from a provided Excel spreadsheet
- Created a Precision Research Assistant powered by AI

LANGUAGES

English — Professional Proficiency

Tamil — Native / Mother Tongue
